

Neuren (NEU) – ASX Announcement

11 January 2021

European Commission grants three Orphan designations for NNZ-2591

Melbourne, Australia: Neuren Pharmaceuticals (ASX: NEU) received notice that the European Commission has adopted the European Medicines Agency (EMA) recommendations to grant Orphan designation for NNZ-2591 in Phelan-McDermid syndrome, Angelman syndrome and Pitt Hopkins syndrome.

Orphan designation in the EU enables sponsors to benefit from incentives including free protocol assistance, fee reductions and 10 years of market exclusivity plus two additional years if approved for paediatric use. During that exclusivity period, the EMA and the EU Member States shall not accept another marketing authorisation application for a similar medicinal product in the same therapeutic indication.

Neuren plans to commence Phase 2 trials in patients with each of Phelan-McDermid syndrome, Angelman syndrome and Pitt Hopkins syndrome in 2021 to confirm the potential of NNZ-2591 to address the urgent unmet need in these three serious childhood disorders which have no approved medicines. In animal models, treatment with NNZ-2591 corrected all deficits in mice with each syndrome and had no effect on normal mice.

About Neuren

Neuren is developing two new drug therapies to treat five serious neurological disorders that emerge in early childhood, none of which have any approved medicines.

The lead drug compound, trofinetide, is currently in a Phase 3 clinical trial for Rett syndrome and has completed a Phase 2 clinical trial in Fragile X syndrome. Because of the urgent unmet need, the programs have each been granted Fast Track designation by the US Food and Drug Administration (FDA) and “orphan drug” designation in both the United States and the European Union, a designation that provides incentives to encourage therapies for rare and serious diseases.

Neuren has granted an exclusive licence to ACADIA Pharmaceuticals Inc. for the development and commercialisation of trofinetide in North America, while retaining all rights outside North America.

Neuren is advancing the development of its second drug candidate NNZ-2591 for Phelan-McDermid, Angelman and Pitt Hopkins syndromes, each of which has received orphan drug designation in the United States and the European Union. Neuren is conducting a Phase 1 clinical trial of NNZ-2591 and plans to initiate Phase 2 trials in all three disorders in 2021.
